**Use it for one-to-one mentoring, small group sessions or classroom amplification. The CD Learning Combo comes with an internal rechargeable battery that allows you to use it outside or in areas where there is no access to mains.**

### One-to-one mentoring

Help your students progress faster and learn easier through one-to-one mentoring. The CD Learning Combo is a speaker for classroom that allows you to plug in 2 headsets (one for the teacher, the other one for the student) and communicate through the built-in headset mic. The headsets help block distracting sounds and noise while also providing a safe setup where the student can make mistakes without fear of failure. Address specific learning gaps

- Choose a pace appropriate for each student
- Increase students confidence and willingness to participate
- Help with particular aspects of reading

Ideal for one-to-one mentoring.

**Features based on requests from teachers to help with a growing demand for the ability to have one to ones with pupils but having difficulty finding quiet space in school to do this.**

Pupils respond better in an environment where they feel safe and have the confidence and encouragement to speak out without being criticised. Pupils with low esteem or lack of confidence hold back when they think they are being overheard by peers. They don't want other children to hear them speak as they are afraid of making mistakes and being made fun of. By practising speaking with someone they trust and who is mentoring them they soon gain more confidence to speak freely in most situations.

The CD Learning Combo comes with 2 built-in headset sockets. Using the headsets allows the teacher and pupil to converse discretely and without ambient noise distractions, even in a noisy environment just like a normal classroom. Using the headsets they allow even the slightest of the audible sounds of the teacher and pupil to be heard clearly and precisely without straining. This same process can be used to assist reading, by listening to the pupil read aloud immediate and positive guidance can be given boosting their vocabulary and confidence.

The unit is battery powered so it can be very portable and safe to use without trailing cables. It can be used outdoors for story times under a tree!
